#ExpertsLiveEU

@ExpertsLiveEU

An abstract graphic on the left side of the slide. It features a blue silhouette of a person climbing a vertical line. Several thick, flowing ribbons in shades of blue and green wrap around the vertical line and the person, creating a sense of movement and complexity.

# From on-premises to Azure - Ten tips for your successful migration

# Eric Berg

- Lead IT-Architect at COMPAREX
- Microsoft MVP Azure & CDM
- ericberg\_de
- <https://ericberg.de>

# Florent Appointaire

- Freelance Cloud Architect – Belgium
- Azure and Azure Stack certified
- Microsoft MVP Cloud and Datacenter Management x 3
- @florent\_app

# Tip 1 – Have your Azure Governance set

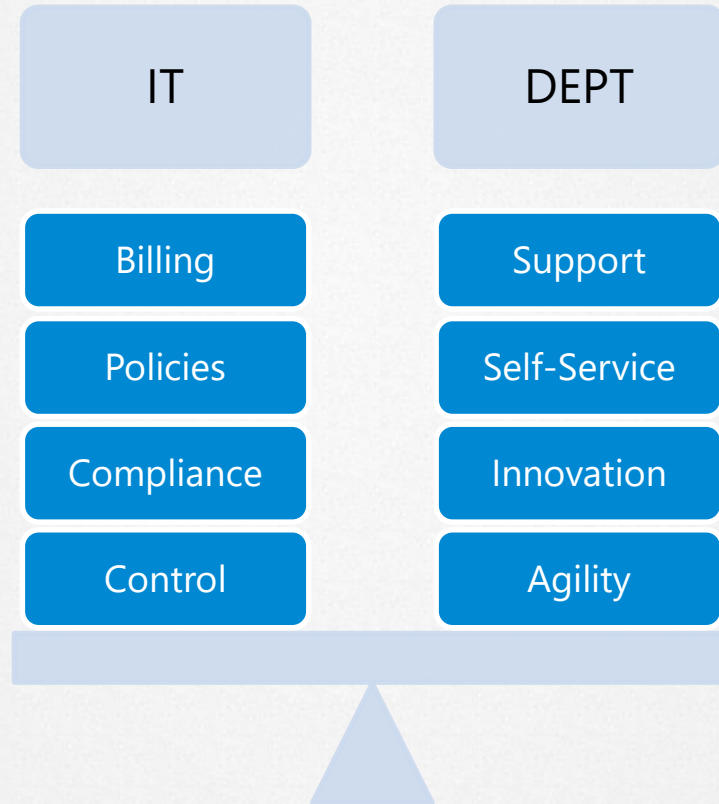

Azure Governance as the basis for Cloud Adoption  
Rules and Policies for Cloud Usage  
Baseline for Auditing  
Continuous optimization  
Enable projects to work on their own

## Tip 2 – Think about different requirements

# Tip 3 – Assess your infrastructure

Information is the base of success

Check your inventory

Check your contracts

Define your needs

Define your benefits

## Tip 4 – Do not rebuild your on-premises structure

Cloud needs trust

Good old DMZ not interesting anymore

New services require new ways

Agile is only possible if you are agile

## Tip 5 – Azure consumption is billed

“In Azure nobody cries for you”

If you run resources you have to pay for them

Have cost monitoring in place

Usage APIs and 3<sup>rd</sup> Party Tools available

Good structure helps to divide costs

## Tip 6 – Identity is the new perimeter

Azure AD is the center of everything

Instead of DMZs – build modern Auth-based solutions

Support the modern Workplace

Always on but secure

## Tip 7 – Include your users

Involve users in project

Use Key-User Framework

Focus on benefits

Explain and evangelize

Train and educate

Check processes and consider change

Managed Services can help to focus

## Tip 8 – Consider Transformation instead of Migration

Build logical blocks → do not move ERP without DB

Technical and licensing show-stoppers

Define your infrastructure requirements

Check your application compatibility

Think about processes

- Development / Deployment

- Update / Upgrade

- Help-Desk

- SLAs

## Tip 9 – Keep up to date

Continuous Learning and Knowledge Growth

Implement new features and services

Review architecture on a regular basis

Audit your Governance

Consider changes fast

## Tip 10 – Plan for the future

End to end planning

Save money and forecast cost

Keep an eye on resources

Better adoption of services

IaaS to PaaS
